## REMARKS.

NOTE.—I have thought proper in this recapitulation to include the Cistern sugar, estimated at 5 0/0 on the crop, believing that a large portion of it will be re-boiled by the Planters themselves, as the Refiners last year lost money at the prices they paid, and besides it is really sugar and should therefore be estimated in the crop.

The Molasses, as was the case the last year, is generally estimated as less than usual, but whilst the old plantations have made less than usual, the new ones have given a fuller yield, and it will therefore not be correct to estimate it at less than 45 gallons per 1000 lbs. sugar, or upwards of 9 millions of gallons.

Though, with extended culture and new plantations on the river and Bayou Lafourche, the Parishes have yielded less than last season, with a few exceptions all planters have fallen short, while the Attakapas Parishes have produced considerably more than last season.

The early frost has probably injured the crop to the full extent of 15000 Hhds, and some crops have been entirely lost by not being ready in time to grind; one large crop by the Sugar house being burnt when just begun making sugar.

Since completing my work I have learned of the existence of several Sugar houses having made sugar the past season, but as it was too late for me to visit them, I have concluded not to notice them for the present.

I find there will be in full operation in 1847-8, 1240 Sugar houses owned by 2077 separate Proprietors or heads of families; the produce this last year from 955 sugar mills is 186,650 Hhds., or 207,337 Hhds. of one thousand pounds nett; that there are 204 sugar mills that will produce in 1846, '47 and 81 that will produce in 1847-8, but fully expect the number will be still further increased, as there are such large bodies of sugar lands on the River and Bayous that only require capital to place them under culture, and there is no doubt the culture of the cane can be extended further west, and I believe the day is not far distant when our Red River Steam Packets will be equally loaded with Sugar and Molasses as well as Cotton, as our Bayou Sarah Packets now are,

Of the 1240 Sugar mills which will be in full operation in 1847-8 about 630 will be by steam power and 610 by horse power, but the former will rapidly increase, as good many Planters now working by horse power have already contracted for their Engines, besides the new Planters that are generally speaking preparing for Steam Engines.

Had my Statement been deferred until the last of April, I have no doubt, it would be ascertained that the crop is larger than I make it, as I am sorry to say that some parties interested who view a large crop in a different light to what I do, have endeavoured to lead me into error on that subject, though I owe my thanks to many who have assisted me in obtaining correct information.

NEW-ORLEANS, March 21 1846.

## REMARQUES.

NOTA. J'ai cru à propos d'inclure dans cette récapitulation, les sucres de fonds de citernes estimés à 5 0/0 sur la récolte, dans l'opinion qu'une bonne portion sera repassée par les habitans eux-mêmes, attendu que les Raffineurs ont perdu de l'argent aux prix qu'ils les ont payés l'an dernier. D'ailleurs ce produit est réellement du sucre, et doit en conséquence figurer dans la récolte.

Cette année comme la dernière, la récolte de Mélasse est estimée plus faible que d'ordinaire : mais tandis que les vieilles habitations ont moins produit, les nouvelles ont produit davantage : il ne serait donc pas correct de l'évaluer à moins de 45 gallons par 1000 livres de sucre, ou au-delà de 2 millions de gallons.

Malgré l'augmentation de la culture et les nouveaux établissemens sur le fleuve et le Bayou Lafourche, la récolte n'y a pas atteint le chiffre de l'an dernier, chaque plantation ayant moins produit à quelques exceptions près ; tandis que les Attakapas ont beaucoup plus donné que l'an dernier.

La gelée survenue dans les derniers jours de Novembre a probablement fait un tort de 15000 boucauts ; quelques récoltes ont été entièrement perdues, parce qu'on n'a pu rouler à temps ; enfin une forte récolte a été détruite par l'incendie de la sucrerie après quelques jours de fabrication.

Lorsque mon travail était terminé, j'ai appris l'existence de plusieurs sucreries qui ont fait du sucre cette année ; mais la saison avancée m'ayant empêché de les visiter, je me suis décidé à les omettre pour le présent.

Je trouve qu'il y aura en pleine opération en 1847-8, 1240 sucreries appartenant à 2,207 différens propriétaires ou co-associés, chefs de famille.

Le produit, cette année, de 955 moulins à sucre a été 186,650 Boucauts ou 207,337 milliers net. En 1846-7, 204 nouveaux moulins et en 1847-8, 81 entrèrent en opération ; mais je pense que ce dernier chiffre pourra s'augmenter encore à cause de la grande étendue de terres sur le fleuve et les bayous qui n'attendent que des capitaux pour être mises en plein rapport. Il n'y a point de doute que la culture de la canne à sucre ne puisse s'étendre plus dans l'ouest ; et je crois que le jour n'est pas très éloigné où les Paquebots à vapeur de la Rivière Rouge arriveront avec un chargement moitié sucre, moitié coton, comme le font aujourd'hui ceux de Bayou Sara.

Des 1,240 moulins à sucre qui doivent être en pleine opération en 1847-8, environ 630 seront à vapeur, et 610 à chevaux ; mais le nombre des premiers augmentera de beaucoup, car plusieurs habitans qui jusqu'à présent se servaient de moulins à chevaux ont déjà fait marché pour leurs machines à vapeur, indépendamment des nouveaux qui presque tous montent à la vapeur.

Si j'avais retardé la publication de mon travail jusqu'à la fin d'Avril je ne doute pas que la récolte ne dépassât mon chiffre total ; car je le dis à regret, parmi les parties intéressées, il en est plusieurs qui, considérant une forte récolte sous un point de vue différent du mien, ont essayé de m'induire en erreur sur ce sujet, tandis que d'un autre côté je n'ai qu'à me louer du plus grand nombre, qui m'ont aidé à obtenir des données exactes.

Nouvelle-Orléans, 6 Mars 1846.

P. A. CHAMPOMIER.
